ASSEMBLY SOLUTIONS

We also supply a full range of industrial hose assemblies including:

- AIR ■ WATER ■ STEAM ■ CHEMICAL
- FOODSTUFFS ■ BULK HANDLING
- CHEMICAL & COMPOSITE

INTEGRAFLEX SERVICES

LARGE BORE SWAGING

Swaging is the definitive method for retaining hi-pressure hydraulic couplings into hose and has been widely accepted as the safest, most secure and reliable method of hose assembly available on the market.

Swaging of large bore assemblies (above 2") has been a relatively recent development, with Integraflex management being directly involved in the development of this method in the U.K

market and investing in the most modern swaging equipment available, which we can now offer to you.

Integraflex offer a full swaging service whereby we can swage to 8" bore in-house, offering a fully tested and certified assembly to suit your specific customer requirements.

We have test facilities to suit large bore hoses in long lengths and can hydrostatically test to 160bar

Integraflex can also offer steam testing to 150°C for steam, hot water, bitumen assemblies etc. *Please call us to discuss.*

HOSE TESTING

Integraflex hydrostatically proof pressure test your hose assemblies. We give the hose assembly a unique traceable number which is permanently attached to the hose using one of a number of proven methods, and is then recorded in a dedicated register for full traceability.
